Introduction

Project Title: -???-

1 Executive Summary

Sums up each of the sections in this document concisely by outlining the project:

- Definition
- Team Members
- Organisation and plan
- Risks Management
- Technical/Economic Feasibility Issues
- Assumptions and constraints.

2 Project Definition

The system is for the administration and tracking of transport vehicles for a Cargo-Fleet. The system will perform certain tasks to help make the jobs of the employees simpler and more manageable by being able to track all vehicles, their locations, cargo being carried and where is the cargo being taken to.

Vision

The system is made to help reduce the workload and efficiency of the Cargo-Fleet and will make it easy to track all the variables involved in the business:

- We will deliver a robust, scalable management system to the business.
- The system will be affordable.
- We will successfully change the cargo transporting industry.
- Make a system that will help increase profits.

Objectives

Through this system we will be able to increase the efficiency of the business and make it more stable and easy to manage as the data will be processed and displayed in the simpler manner that is easy to interpret. The application will be easy to use, and registration will not be a bother at all as well as checking the statuses of drivers and trucks at any given time.

- To help businesses process orders better.
- To help businesses make better choices based on the information we provide.
- Make it easier to track cargo
- Make it easier to track the drivers
- Track the servicing of trucks more efficiently

Scope

Define the scope of the project in terms of the business:

- The System is meanly all at Sites that will be registered in the system and any vendors we deliver to.
- All provinces will be included.
- The system might pose a threat to existing cargo management systems that are active.
- The management systems of many businesses will be altered when they register with our system.
